Our brakes – perfect for your safe application

KENDRION Industrial Brakes – stands for smart innovation and excellent service, which we consistently apply for the benefit of our customers:

Strong know-how

Our specialists develop the leading-edge permanent magnet and spring-applied brakes. With INTORQ as a new member of KENDRION, we have once again consistently expanded our range of spring-applied brakes and clutches for you. This way, we can find the right solution for any of your requirements.

Complete product portfolio

Electromagnetic brakes and clutches as well as perfectly matched accessories: with us you will find an exceptionally large selection of quickly available off-the-shelf products that can be put together in a modular system and the best expertise for customer-specific solutions.

Dynamic innovative power

More than 50 specialists working in agile teams in our research and development worldwide are creating convincing product solutions for tomorrow.

Excellent market knowledge

We are very familiar with our focus markets – thanks to extensive experience and research, but also thanks to long-term customer relationships built on partnership and eye-to-eye cooperation.

International power

Committed and competent employees, production sites in Germany, United States, India and China as well as a large number of certified sales partners all over the world make us a strong partner for you!

The INTORQ BFK458

On the point

- Fail-safe spring applied-brake
- Adjustable service brake and holding brake
- Standard modular system with many options
- 9 sizes from 1.5 Nm to 720 Nm
- Reducible brake module (Type E)
- TÜV-Nord safety certificate
- UL-certified

Suitable for the use of:

Conveyors

Industrial trucks

Wind power

High-speed gates

Customizable service brake and holding brake with a short delivery time

The wide use of IEC standard motors in the industrial sector requires a variable brake for the various applications in the industries served. In addition to the holding function, dynamic braking processes are needed for motors operated directly from the grid.

The modular system of the INTORQ BFK458 spring-applied brake series from Kendrion has proven itself in the field for many years and is ideally suited for a wide range of requirements.

The INTORQ BFK458 contains both standard solutions that can be applied universally and specific solutions for special industry requirements. The key feature: compatible components that can be freely configured with each other. This system, developed by INTORQ, allows you to combine brakes for classic industrial applications. Your advantage: a wide range of options, fast project development, and rapid delivery.

The INTORQ BFK458, labeled with the CE mark and CSA certified, is suitable for all markets worldwide. Solutions for ATEX and extended temperature ranges are available, as well as solutions for noise-sensitive applications.

The INTORQ BFK458 is ideally suited as a service brake for applications requiring regular, frequent braking operations and has a very high wear reserve owing to the readjustment option. All INTORQ BFK458 service brakes also meet the requirements of the holding brake function and emergency stop function. For optimum control of the brakes, Kendrion offers the corresponding rectifiers, depending on the requirements. Please get in touch with us!

Easy to combine.
Mounted brake with
the features of your choice.

Technical highlights

- INTORQ BFK458L long-life version available in sizes 06 to 12
- Guaranteed service life
- Proof of suitability for functional safety (safety brake)
- ATEX: suitable for use in explosive atmospheres of Zone 2 and Zone 22 for stationary operation (holding or parking brake) and temperature class T4
- Certified also for use as a service brake
- CCV (Cold Climate Version), temperature resistant up to -40°C

Features

The series offers various options that can be customized in addition to the standard option.

- **Various microswitches**
with reliable service life and UL for monitoring the switching function and for wear control
- **Dust protection ring and seals**
to protect the brake from dust, metal chips, and water and to protect the surroundings from friction dust
- **Monitoring of manual release** with microswitch
- Use within different **temperature ranges**
- **Friction linings** for special requirements
- PT-100 elements in the **friction parts**
- **Noise-reduced** applications

Options

Several brake options possible using a single stator:

- Various positions of the manual release
- Various fastening options
- Torque adjustment for the E-version
- Connection to various shaft diameters by using the compatible standard hub (hub diameter)

Technical data

Design types	Basic module N, Basic module E
Standard rated voltages	24 V, 103 V, 180 V, 205 V
Protection class	IP00 – IP55
Thermal class	F (155°C)
Ambient temperature	-20°C to 40°C -40°C to 40°C (CCV option)
Rated torques	1.5 to 600 Nm 7.5 to 720 Nm (HFC coating)
Duty cycle	100% duty cycle
Nominal backlash	1°
Options	Friction plate, flange, hand release, cover ring, cap, threaded holes, ...
Note	Please read the general information on data sheets and the corresponding operating instructions. Design subject to change without notice.

Brake size	Rated torques for service brakes @ 100 [min ⁻¹]	Rated torques for holding brakes ¹⁾ @ 100 [min ⁻¹]	Maximum speed n _{max} [min ⁻¹]	Switching work one-time switching W _{max} [J]	Number of emergency stops for holding brakes Z _{ges} [-]	Friction work until maintenance for service brakes with WR lining Q _{GW} [MJ]
06	4	6	6000	3000	500	85
08	8	12	5000	7500	500	158
10	16	23	4000	12000	500	264

25	400	600	3000	120000	500	3522

¹⁾ Holding brakes can be used as service brakes but require more frequent adjustments or overexcitation.

Basic module E, rated torque reduction

The rated torque of the basic module E can be reduced using the adjustment ring located in the stator. The adjustment ring may only be unscrewed to the maximum n_{1max} measure. Please note that the engagement and disen-

agement times change depending on the rated torque. The torque reduction depends on the rated torque.

Brake size	06	08	10	12	14	16	18	20	25
Torque reduction per detent position [Nm]	0.2	0.35	0.8	1.3	1.7	1.6	3.6	5.6	6.2

Rotors with HFC coating increase the amount of the torque reduction by 25%

Dimensions Basic module E (with adjustment ring)

KENDRION

INTORQ

POWERED BY KENDRION

Customized solutions – tailored exactly to your needs

Automation solutions have become an indispensable part of industry and everyday life. In this context, it is often the brakes that ensure safety: They hold loads and brake reliably in an emergency.

Just as automation continues to evolve, brakes must also face higher demands – forward-looking products are in demand. At the same time, quality and safety must be unconditionally guaranteed. This is a challenge that Kendrion Industrial Brakes meets with passion and care.

When it comes to developing customer-specific solutions, we have three aces up our sleeves:

- With our **new agile organization**, we respond much faster to customer requests.
- Our **modularly developed products** enable new configurations without complete redevelopment.
- The **global structure of our organization** bundles competencies and ensures valuable knowledge transfer.

This makes us a competent and reliable partner for our customers – starting with industry-savvy consulting, through product development with practical experience, to uncompromising quality assurance.

We will find the
solution that suits
you best!
